Parasoleil, the quick version

With every new good idea comes the question, “Why?”. Whether it’s in copper, steel, powder-coated aluminum, or any number of other materials in varying thicknesses, the Parasoleil sales team strives to understand each project so that every installation is enjoyed for years to come.

It’s about design that lasts; it’s about sustainability; it’s about the shadows!

COPPER LASTS FOREVER

- Maintenance-free
- Is as timeless as building with stone
- Protects the wood underneath it
- Ages beautifully to a dark bronze or verdigris green
- Each pattern tested for snow and wind loads

PARASOLEIL IS AN ECO-FRIENDLY ARCHITECTURAL MATERIAL

- Represents the next generation of “green,” versatile building materials
- Recyclable
- Energy-efficient
- Compliments any architectural installation
- Unlimited applications
- Using the best material for each project, made to last

SHADOWS PROVIDES A COOLING SHADE

- Aesthetic shadows change with the sun throughout the day
- Cast shadows on walls, entryways, and fountains with lighting projection
- Because of its patterns, panels will not radiate heat down to a sitting area
